Do you know your pH...?

Our body likes to keep itself slightly alkaline and in a very narrow range. Anything outside this range causes stress on the body.

This shows itself in the following forms:

- Lack of **Energy** or Chronic Fatigue
- Poor Circulation
- High Blood Pressure
- Heart Disease
- **Weight Gain**
- Obesity
- **Irritability, Nervousness & Leg Cramps**
- Inflammation
- **Joint Fatigue, arthritis, Rheumatism & Gout**
- Gastro Intestinal Disorders, **(IBS)**
- Acid Reflux & Irregular Bowl Movements
- Diabetes and kidney Stones
- Allergies
- Skin Disorders
- Osteoporosis
- Candid
- Cancer

Acidosis is the condition of acidity in the body, when the pH is off balance, you might be acidic and just need to up-regulate your pH.

Nobel Prize Winner Dr. Otto H Warburg

Biochemist Otto Heinrich Warburg, one of the twentieth century's leading cell biologists, discovered that the root cause of cancer is too much acidity in the body, meaning that the pH, potential hydrogen, in the body is below the normal level of 7.365, which constitutes an "acidic" state. Warburg investigated the metabolism of tumours and the respiration of cells and discovered that cancer cells maintain and thrive in a lower pH, as low as 6.0, due to lactic acid production and elevated CO2. He firmly believed that there was a direct relationship between pH and

oxygen. Higher pH, which is Alkaline, means higher concentration of oxygen molecules, while lower pH, which is acidic, means lower concentrations of oxygen...the same oxygen that is needed to maintain healthy cells. In 1931 he was awarded the Nobel Prize in Medicine for this important discovery. Dr Warburg was director of the Kaiser Wilhelm Institute (now Max Planck Institute) for cell physiology at Berlin. He investigated the metabolism of tumours and the respiration of

cells, particularly cancer cells. **"All normal cells have an absolute requirement for oxygen, but cancer cells can live without oxygen - a rule without exception."** Deprive a cell 35% of its oxygen for 48 hours and it may become cancerous." Dr. Warburg has made it clear that the root cause of cancer is oxygen deficiency, which creates an acidic state in the human body. Dr Warburg also discovered that cancer cells are anaerobic (do not breathe oxygen) and cannot survive in the presence of high levels of oxygen, as found in an alkaline state.
